

# YOUR HOME HAS ABSORBED TONNES OF CO<sub>2</sub> FROM THE AIR.

The average timber framed home has removed more than eight tonnes of CO<sub>2</sub> from the atmosphere.

Your timber framed home has created opportunities for new trees to be planted, continuing the forest cycle of grow, harvest, repeat. Your timber frame plays an essential role in mitigating atmospheric carbon and contributing to the preservation of our shared environment.

Thank you for choosing timber framing, and building a better world.
